

Project Documentation

1. Project Overview

Project Title:

User Introduction Program

Objective:

The objective of this project is to create a simple Python program that collects user information such as name, age, and hobby, and displays a friendly welcome message. This project helps beginners understand basic Python concepts like input, variables, and output.

Goals:

- Learn how to use `input()` for user interaction.
 - Store data using variables.
 - Display information using `print()`.
 - Build confidence in writing simple Python programs.
-

2. Setup Instructions

Prerequisites:

- Python 3.x installed on your computer
- Visual Studio Code (VS Code)

Installation Steps:

1. Download and install Python from:
 - [Python Official Website](#)
2. Download and install VS Code:
 - [Visual Studio Code](#)
3. Open VS Code.
4. Install the Python extension.
5. Create a new file named `welcome.py`.
6. Write the Python code.
7. Save the file.

8. Open Terminal and run:

`python welcome.py`

3. Code Structure

File Hierarchy

Python-Project/

```
|
|— welcome.py
|— README.md
└─ screenshots/
    └─ output.png
```

Source Code

```
name = input("Enter your name: ")
age = input("Enter your age: ")
hobby = input("Enter your hobby: ")

print("\nWelcome!")
print("Name:", name)
print("Age:", age)
print("Hobby:", hobby)
print("Nice to meet you,", name + "!")
```

4. Visual Documentation

Screenshot 1:

Program asking for user information.

Screenshot 2:

A screenshot of a Visual Studio Code terminal window. The terminal title bar shows 'powershell' and standard window controls. The terminal content shows a command prompt session where a Python script named 'personalinfo.py' is executed. The script prompts the user for their name, age, and hobby. The user enters 'Aswini', '20', and 'reading' respectively. The program then displays a welcome message with the user's input: '==== Welcome ====', 'Name: Aswini', 'Age: 20', 'Hobby: reading', and 'Nice to meet you, Aswini!'.

Program displaying the welcome message.

(Insert screenshots captured from VS Code terminal.)

5. Technical Details

Concepts Used:

- **Input Function:** Collects information from the user.
- **Variables:** Store user data.
- **Print Function:** Displays information on the screen.

Algorithm:

1. Ask the user for their name.
2. Ask for their age.
3. Ask for their hobby.
4. Store all responses in variables.
5. Display a personalized welcome message.

Data Structure:

- Simple string variables are used.
 - No complex data structures are required.
-

6. Testing Evidence

Test Case 1

Input

Name: Aswini

Age: 20

Hobby: Reading

Output

Welcome!

Name: Aswini

Age: 20

Hobby: Reading

Nice to meet you, Aswini!

7. What I Learned

Through this project, I learned the basics of Python programming, including taking user input, storing data in variables, and displaying output. I also learned how to run Python programs in VS Code and understand program execution flow. This project improved my confidence in writing simple interactive applications and strengthened my understanding of fundamental programming concepts.

8. Conclusion

The User Introduction Program successfully collects user details and displays a personalized welcome message. It serves as a beginner-friendly project for learning Python fundamentals and provides a strong foundation for more advanced programming concepts.
